

SMW Feedhorns, Depolarizers, Quarterwave transformer, Waveguide & Adapters

Good matching and low losses allow the LNB or OMT to work under optimal conditions for best possible performance. Following standard models are available:

- Offset feedhorn XM-601 / XM-611

23 mm (40 mm with adapter) standard offset feedhorn.

- Offset feedhorn XM-351 / XM-351 L

Two offset models for reception of narrow feed, e.g. 3° apart.

- Prime focus feedhorn XM-140

A Prime focus feedhorn with a diameter of 58 mm and circular output.

- Depolarizer RHC/LHC & Waveguide

The Depolarizer converts the circular polarization to linear. For optimal cross polarization (isolation) we recommend to use it together with an OMT.

- Quarterwave transformer

To adapt from circular (output) waveguide C120 to rectangular (input) WR75.

- Adapter C120/C120

On the market there are many different hole patterns for C120. This adapter is the solution if you don't have the right matching.

Swedish Microwave was founded 1986 and, within Europe, is the oldest manufacturer of LNBs. In the standard product range we have DRO-LNBs, PLL-LNBs, LNAs, Block Downconverters (BDC), Up- & Down Converters, Quattro LNBs, Twin LNBs, Ortho mode transducers (OMT), Line Amplifiers and Feed horns.

Swedish Microwave is today one of the leading manufacturers of microwave components needed for satellite receiving equipment and other industrial products.
